English Abstract

Apparatus (28) and method provide a virtual telephone number switchboard service to two parties (20, 22) desiring to communicate anonymously with one another. The service is particularly adapted to use the Internet. Modules are downloadable which can be integrated with web browsers and with web sites such as chat sites. A transaction identifier, or matchcode, effects a virtual telephone number for the parties (20, 22), in which the service acts as an agent to facilitate contact therebetween. In some modes of operation the agent is unaware of the actual telephone numbers or identities of the parties.

French Abstract

Appareil (28) et procede assurant un service de commutation a numeros de telephone virtuels a deux parties (20, 22) desirant communiquer l'une avec l'autre de facon anonyme. Le service est particulierement adapte a l'utilisation sur l'Internet. On peut telecharger des modules pouvant etre integres a des navigateurs Web et des sites Web tel que des sites de bavardage-clavier. Un identificateur de transaction ou code d'appariement met en oeuvre un numero de telephone virtuel a l'attention des parties (20, 22); le service agit alors comme un agent pour faciliter le contact entre eux. Dans certains modes de fonctionnement, l'agent ne connait pas les identites ou les numeros de telephone reels des parties.

English Abstract

A technique for controlling network resources. The resources are controlled by a generalized resource server (629). The user communicates with the server by means of a control client (613). To control a resource, the user provides control inputs to the client. The client uses the inputs to make a package (615) including sender control information (617) which the client sends via email to the server. The server augments the package with additional information where necessary to produce output (622) which controls the resource. The server further permits administrators to monitor and control the use of the resources. One application of the technique is to control printers. Users,

administrators, and recipients can control use of the printers. The techniques can further implement a system (2201) which permits a user to order an electronically-distributed document and receive a printed copy of the document without having access to the document's electronic form.

French Abstract

L'invention concerne une technique pour contrôler les ressources réseau. Les ressources sont contrôlées par un serveur de ressources généralisé (629). L'utilisateur communique avec le serveur au moyen d'un client de contrôle (613). Pour contrôler une ressource, l'utilisateur fournit des entrées au client. Le client utilise les entrées pour créer un paquet (615) comprenant les informations de contrôle utilisateur (617) que le client envoie au serveur par courrier électronique. Le serveur enrichit le paquet d'informations supplémentaires lorsqu'il est nécessaire de fournir une sortie (622) qui contrôle la ressource. Le serveur permet en outre aux administrateurs de surveiller et de contrôler l'utilisation des ressources. Une des applications de cette technique est le contrôle des imprimantes. Les utilisateurs, les administrateurs et les destinataires peuvent contrôler l'utilisation des imprimantes. Les techniques de l'invention permettent en outre la mise en œuvre d'un système (2201) qui permet à un utilisateur de commander un document distribué par voie électronique et de recevoir une copie imprimée du document sans avoir accès à une forme électronique du document.

Detailed Description

... appears and the user specifies the

I I

per-document sender control information by filling in the print screen. When the user clicks the "done" button, email package maker 611 takes the input from the print screen and any necessary default control information from sender control information 609 to make package...via printer server 629. All the user need do at this point to print the document on printer server 629 is click on the "OK" button. The chief difference between screen 801 and standard print screens is shown at 803: instead of the name of a printer, there appears the name of a recipient; the name is one on a list of names which may be viewed by clicking on the button to the left of

1 8

the name. Thus, the user of sender PC 613 need know only the name of the person for whom...

...whose

email address is secure

mkt@rose. hp. com. Package sender control information 617

for the package 615 that will be produced when the OK button is clicked in print screen 901 will indicate that the document contained in the package is to be printed on printers used by the three...

...make sender control information 1006 for packages sent to those printer servers 629, the user selects printer icon 1003, then clicks on the right mouse button.

Menu 1005 appears, and by selecting "Properties" 1007 from that menu, the user of sender PC 613 gets access to the screens which are used ... control information 617 for the package, as does comment 141 1 for the notification messages. FIG. 15 shows the screen reached by clicking on advanced button 1413 in screen 1401. This screen permits the user of sender PC 613 to add further sender control information to package sender control information 617...

...consequently, that name appears in Print For screen 120 1, but not in

Notify screen 140 1. The user can use boxes 1611-1615 and **button** 1619 to add or modify recipient addresses; import 1621 pen-nits the user to import a list of user addresses from a printer server 629... authentication is required, authentication at the front panel of the printer, and authentication by means of an authentication message. The authentication method appears as a **button** in the email message.

When the recipient clicks on the **button** in a situation where authentication by means of the recipient's personal PIN is required, the recipient's system outputs the URL of an authentication Web page provided by printer server 629. FIG. 17 shows authentication Web page 1701. It includes radio **button** 1703 indicating whether the recipient is authenticating all

26

of the packages which printer server 629 has not yet printed for the recipient and radio **button** 1703 indicating whether the recipient wishes to authenticate individual packages. In other embodiments, authentication of documents within a package may be permitted. To identify him...

...server 629, the recipient enters his or her PIN at box 1707; if the PIN matches PIN 21 11 received in the notification message, print **button** 1709 becomes active, and by clicking on print **button** 1709, the recipient sends a response to Web page 1701 to printer server 629 which indicates to it that the documents in the pending packages...

...further authentication from the handler before printing. If no authentication is required or if authentication is to be done at the printer, clicking on the **button** in the email message will produce a Web page like that of 1701 which contains only radio **buttons** 1703 and 1705 and print **button** 1709.

1 5 FIG. 18 shows package selection Web page 1801, which appears when the recipient selects radio **button** 1705 in Web page 1701. List 1803 shows the packages that the recipient has received but have not yet been printed. Subject 1807 comes of...

...screen 801. The recipient may select individual packages from list 1803 by the usual methods, and having done so, the recipient clicks on the print **button**. The response sent ...the authentication is done using front panel 625. Front panel 625 has four main elements: a LCD display 1903, a set of navigation and selection **buttons** 1905, and an alphanumeric keypad 1913 for entering a PIN. LCD display 1903 displays a list of recipients with packages which are to be printed at the printer to which front panel 625 belongs. Using navigation **buttons** 1909, the handler or recipient at the printer can navigate up or down the list; selection **button** 1911 pen-nits the handler or recipient to select an item on the list and cancellation **button** 1907 permits the handler or recipient to cancel a selection. Once the selection is made, the handler or recipient inputs his or her PIN at...

...is to be used. In making administrative control information for printer server 629, the administrator in a preferred environment does the following.

Global Policy

Set **anti - SPAM** filters based on regular expressions.

Determine availability of server 629 (times of day, days of week)

English Abstract

A system and method for distributing a work process on an information network comprises a first subsystem to contract members of a virtual community having access to the information network to perform tasks associated with the work process, the members having an interest in the work process. A second subsystem dispatches tasks to the members requiring the members to evaluate information accessible on the information network and receive the evaluations of the members. A third subsystem processes the evaluations to perform the work process.

French Abstract

L'invention concerne un systeme et un procede servant a distribuer un processus de travail sur un reseau intelligent, et comprenant un premier sous-systeme destine a conclure des contrats avec les membres d'une communaute virtuelle ayant acces au reseau intelligent de maniere qu'ils effectuent des taches associees au processus de travail, lesdits membres presentant un interet pour ce processus de travail. Un deuxieme sous-systeme distribue des taches aux membres en leur demandant d'evaluer les informations accessibles sur le reseau intelligent et recoit leurs evaluations. Un troisieme sous-systeme traite les evaluations pour mettre en oeuvre le processus de travail.

Detailed Description

... a tab set panel that logically groups various URL rating components on individual pages. Each page of the URL rating panel 36b has a help button . The help can either be web-based by taking the user to a particular web page that provides the help text or alternatively, it can ...

...its selection such as for example, Accessed OK, no DNS, Site Not Responding etc.

If the member selects anything other than Accessed OK, a Next button is enabled and all other controls on the other pages of the URL rating panel 36b with the exception of the last page are disabled. The Next button allows the member to request another URL to rate.

The last page of the URL rating panel 36b is a button page that lets the member access community tools such as chat rooms, bulletin boards, point reports, etc on the ICS website. These community tools are...suspicion that a member is rating URLs too quickly to produce proper ratings as well as during random quality audits.

The QMS also includes an anti - spamming quality procedure, which is similar to the rating speed monitor. The anti - spamming quality procedure compares the speed URLs are rated by a member against a standard and also looks for steadystate rating intervals and long stretches of non-stop URL rating by a member. The anti - spamming quality procedure is required because members are often tempted to maximize point returns by creating macro-driven routines that continuously click on the URL request button of the URL rating panel 36b. The anti - spamming quality 1 5 procedure is typically invoked by an audit team manager or community manager when a member is suspected of spamming as well as...

Claim

ABSTRACT EP 1143665 A2

A unified policy management system for an organization including a central policy server and remotely situated policy enforcers. A central database and policy enforcer databases storing policy settings are configured as LDAP databases adhering to a hierarchical object oriented structure. Such structure allows the policy settings to be defined in an intuitive and extensible fashion. Changes in the policy settings made at the central policy server are automatically transferred to the policy enforcers for updating their respective databases. Each policy enforcer collects and transmits health and status information in a predefined log format and transmits it to the policy server for efficient monitoring by the policy server. For further efficiencies, the policy enforcement functionalities of the policy enforcers are effectively partitioned so as to be readily implemented in hardware. The system also provides for dynamically routed VPNs where VPN membership lists are automatically created and shared with the member policy enforcers. Updates to such membership lists are also automatically transferred to remote VPN clients. The system further provides for fine grain access control of the traffic in the VPN by allowing definition of firewall rules within the VPN. In addition, policy server and policy enforcers may be configured for high availability by maintaining a backup unit in addition to a primary unit. The backup unit become active upon failure of the primary unit.

ABSTRACT EP 1143681 A2

A unified policy management system for an organization including a central policy server and remotely situated policy enforcers. A central database and policy enforcer databases storing policy settings are configured as LDAP databases adhering to a hierarchical object oriented structure. Such structure allows the policy settings to be defined in an intuitive and extensible fashion. Changes in the policy settings made at the central policy server are automatically transferred to the policy enforcers for updating their respective databases. Each policy enforcer collects and transmits health and status information in a predefined log format and transmits it to the policy server for efficient monitoring by the policy server. For further efficiencies, the policy enforcement functionalities of the policy enforcers are effectively partitioned so as to be readily implemented in hardware. The system also provides for dynamically routed VPNs where VPN membership lists are automatically created and shared with the member policy enforcers. Updates to such membership lists are also automatically transferred to remote VPN clients. The system further provides for fine grain access control of the traffic in the VPN by allowing definition of firewall rules within the VPN. In addition, policy server and policy enforcers may be configured for high availability by maintaining a backup unit in addition to a primary unit. The backup unit become active upon failure of the primary unit.

ABSTRACT EP 1143664 A2

A unified policy management system for an organization including a central policy server and remotely situated policy enforcers. A central database and policy enforcer databases storing policy settings are configured as LDAP databases adhering to a hierarchical object oriented structure. Such structure allows the policy settings to be defined in an intuitive and extensible fashion. Changes in the policy settings made at the central policy server are automatically transferred to the policy enforcers for updating their respective databases. Each policy enforcer collects and transmits health and status information in a predefined log format and transmits it to the policy server for efficient monitoring by the policy server. For further efficiencies, the policy enforcement functionalities of the policy enforcers are effectively partitioned so as to be readily implemented in hardware. The system also provides for dynamically routed VPNs where VPN membership lists are automatically created and shared with the member policy enforcers. Updates to such membership lists are also automatically transferred to remote VPN clients. The system further provides for fine grain access control of the traffic in the VPN by allowing definition of firewall rules within the VPN. In addition, policy server and policy enforcers may be configured for high availability by maintaining a backup unit in addition to a primary unit. The backup unit become active upon failure of the primary unit.

English Abstract

A technique, specifically a method and apparatus that implements the method, which through a probabilistic classifier (370) and, for a given recipient, detects electronic mail (e-mail) messages, in an incoming message stream, which that recipient is likely to consider "junk". Specifically, the invention discriminates message content for that recipient, through a probabilistic classifier (e.g., a support vector machine) trained on prior content classifications. Through a resulting quantitative probability measure, i.e., an output confidence level, produced by the classifier for each message and subsequently compared against a predefined threshold, that message is classified as either, e.g., spam or legitimate mail, and, e.g., then stored in a corresponding folder (223, 227) for subsequent retrieval by and display to the recipient. Based on the probability measure, the message can alternatively be classified into one of a number of different folders, depicted in a pre-defined visually distinctive manner or simply discarded in its entirety.

French Abstract

L'invention concerne une technique, en particulier un procede et un dispositif de mise en oeuvre dudit procede, qui, au moyen d'un classificateur (370) probabiliste et, pour un destinataire donne, detecte les messages electroniques poubelle dans une sequence de messages entrants, messages que ce destinataire est susceptible de considerer comme "messages poubelle". L'invention permet notamment de separer le contenu du message pour le compte du destinataire, au moyen d'un classificateur probabiliste (par exemple, une machine vecteur de support) utilisee au prealable pour des classifications de contenus. Une mesure de probabilite quantitative, soit un niveau de confiance de sortie, produit par le classificateur pour chaque message, et compare ensuite a un seuil predefini, permet de classer le message, soit comme message poubelle soit comme message valable, puis de l'enregistrer, par exemple, dans un dossier correspondant (223, 227) en vue d'une extraction et d'un affichage ulterieurs par le destinataire. Suivant la mesure de probabilite, le message peut etre classe dans un dossier parmi plusieurs dossiers differents, marque d'une facon visuellement distinctive predefinie, ou simplement supprime dans son integralite.

English Abstract

A unified system of programming communication. The system encompasses prior art communications (such as, for example, television, radio, electronically transmitted print, and computer communications) and new user specific mass media. Within the unified system, computer system means (205) and methods provide capacity for generating relevant user specific information simultaneously at each station (26) of a plurality of subscriber stations (26).

French Abstract

Système unifié de communication a programmation regroupant les communications de l'art antérieur (telles que par exemple la télévision, la radio, l'impression transmise électroniquement, et les communications par ordinateur) ainsi que les nouveaux mass medias spécifiques aux utilisateurs. Dans le système unifié, des moyens (205) et procédés mettant en oeuvre des systèmes d'ordinateurs ont la capacité de produire des informations spécifiques a un utilisateur particulier, simultanément a chaque poste (26) d'une pluralité de postes d'abonnés (26).

Claim

... a schedule which

determines what prerecorded, so-called local origination

30 programs will be transmitted, when,, and over what channels.

The computer generates a video **image** of this schedule which

it transmits over one cable channel to viewers which permits

them to see when they can view the programs they request...switch systems

or fasten and unfasten cabling each time. In

addition, using a so-called limage,-within-imagell capacity,,

the viewer can superimpose a secondary **image** from a second

peripheral unit upon the primary image on the television

display. in this fashion, two peripheral units can be viewed

30 simultaneously on...would appear as a line of a designated color,

such as red, on a background color that is transparent when

overlaid on a separate video **image** . Black is such a

background color, and Fig. 1A shows one such line.

As each subscriber station completes the steps of

calculation and graphic imaging...in

its graphics card onto the received composite video

information and transmit the combined information to TV

monitor, 202M. TV monitor, 202M, then displays the **image**

shown in Fig. 1C which is the microcomputer generated graphic

10 of the subscriber's own portfolio performance overlaid on the

studio generated graphic. And...present invention are the

modalities whereby stations that originate programming

transmissions control the handling, generating, and

20 displaying of programming at subscriber stations.

(The term,, " SPAM ," is used, hereinafter, to refer to signal processing apparatus and methods of the present invention.)

SPAM signals control and coordinate a wide variety of 25 subscriber stations. Said stations include so-called "local affiliate" broadcast stations that receive and retransmit single...automatic comparing fashion. (Buffer/comparator, 8, is preprogrammed with information that identifies said portion.) A match results with particular comparison information that is the bit image of particular SPAM execution segment information 15 that instructs URS signal processors, 200, to decrypt. Said match causes buffer/comparator, 8, to transfer to controller,

20 particular decrypt...above, running the information of said program instruction set causes microcomputer, 205, (and URS microcomputers, 205, at other subscriber stations) to place appropriate Fig. 1A image information at particular video RAM. In addition, running said set also causes microcomputer, 205, after completing placing said image information at said RAM, to transfer...

Detailed Description

Claims

Fulltext Word Count: 9232

English Abstract

A system and method for distributing information to interested users according to predefined preferences over the Internet. The invention provides improved techniques for reaching potential recipients, for simplifying the initial response by interested individuals, and for facilitating the gathering and organizing of information from those individuals. The communication structure includes one or more servers and

a plurality of dedicated client-side communication modules ("comm modules"). The servers store multimedia entertainment, advertising, or other information content as well as profile information for the users of the comm modules. The stored information is organized according to the user profiles and is selectively made available for downloading on demand. The comm modules are preferably made available for installation on the client-side computers by distribution as an adjunct to the information, advertising or entertainment content of a multimedia product such as a CDROM or DVD. Profile information is developed the first time a user goes on line after installing the software. The comm module displays a small icon on the user's desktop which changes state whenever there is new information on the server corresponding to the user's profile. Users may then access the information at their convenience. The comm module includes a mini Web browser programmed for display of full-featured Web pages. It is compatible with operating systems commonly in use, and is runtime configurable and upgradable via server configuration messages. When the user goes online, the comm module connects directly to a routing server at a predetermined Internet address.

French Abstract

Cette invention se rapporte a un systeme et a un procede permettant de distribuer via l'Internet des informations a des utilisateurs interesses selon des preferences predefinies. Cette invention presente des techniques ameliorees permettant d'atteindre des destinataires potentiels, de simplifier la reponse initiale par des personnes interessees et de faciliter le regroupement et l'organisation d'informations provenant de ces personnes. Cette structure de communication comprend un ou plusieurs serveurs et plusieurs modules de communication cote client specialises (appeles "modules communs"). Les serveurs stockent des contenus d'informations multimedia de type divertissements, publicites ou autres, ainsi que des informations de profils pour les utilisateurs des modules communs. Les informations ainsi stockees sont organisees en fonction des profils d'utilisateurs et elles sont rendues selectivement disponibles pour un telechargement a la demande. Les modules communs sont rendus de preference disponibles pour etre installes sur les ordinateurs cote client par distribution sous la forme de pieces jointes au contenu d'informations, de divertissements ou de publicites d'un produit multimedia, tel qu'un CD-ROM ou un DVD. Les informations de profil sont elaborees la premiere fois que l'utilisateur se connecte au reseau apres l'installation du logiciel. Le module commun affiche sur le plan de travail de l'utilisateur une petite icone qui change d'etat chaque fois qu'apparaissent de nouvelles informations sur le serveur correspondant au profil d'utilisateur. Les utilisateurs peuvent ensuite acceder a ces informations a leur convenance. Le module commun contient un mini-navigateur Web programme pour afficher des pages Web toutes fonctions. Il est compatible avec les systemes d'exploitation couramment utilises et il est configurable en version executable et extensible via des messages de configuration du serveur. Lorsque l'utilisateur se connecte au reseau, le module commun se connecte directement a un serveur de routage a une adresse Internet predeterminee.

English Abstract

A combination of systems and methods for the electronic transmission, reception, storage, retrieval and display of data allocated to or transmitted from user accounts, addressed by other users through a variety of designators. These designators specifically include convenient well-known information such as a physical street postal address or a telephone number, from which the invention derives special designators called unique identifiers. A unique identifier is a determinate combination of a user's name and a physical address. A set of methods and systems provide for the transmission or display of data via different classifications, such classifications allowing for strong user control of content. An additional set of methods and systems provides for both physical printed delivery of data to any user with or without a user account, and for storage, retrieval and display of advertising data with such physical or electronic data based upon identifying characteristics of the user including the geographic location of the user.

French Abstract

Le courrier numerique (Dmail), le reseau de courrier numerique "sup"™, et le service postal de courrier numerique forment une combinaison de systemes et de techniques assurant la transmission, la reception, le stockage, la saisie et l'affichage electroniques de donnees affectees a des comptes clients ou transmis a partir desdits comptes, et adressees par d'autres utilisateurs via divers indicateurs. Ces indicateurs comprennent plus specialement des informations pratiques connues telles que l'adresse postale physique de la rue ou un numero de telephone, a partir desquelles la presente invention permet de deduire des designatifs speciaux dits identificateurs uniques. Par identificateur unique, on

entend une combinaison determinee de nom d'utilisateur et d'adresse physique. Grace a un ensemble de techniques et de systemes, il est possible de transmettre ou d'afficher des donnees via diverses classifications, lesquelles permettent a l'utilisateur d'avoir la haute main sur le contenu. Un autre ensemble de techniques et de systemes assure a la fois la fourniture physique de donnees sous forme imprimee a n'importe quel utilisateur, titulaire ou non d'un compte utilisateur, et le stockage, la saisie et l'affichage de donnees a caractere publicitaire avec de telles donnees physiques ou electroniques apres identification des caracteristiques de l'utilisateur, dont son emplacement geographique.

Fulltext Word Count: 14810

English Abstract

A system (20) and method is provided for automatically monitoring events occurring at devices (22) such as web servers (90) and websites (90), responding, and providing closed-loop response verification. The system (20) and method automatically identifies events, implements pre-specified actions in response thereto, and verifies that information regarding events has been successfully communicated. Once an event is detected and notification of at least one respondent has been completed, the system (20) awaits further information to indicate that the respondent (26) has received notification and/or has or will taken corrective action. The notification may be escalated to additional respondents (26) until some respondent (26) commits to take such corrective action. The present invention thus helps ensure that every event is recognized and any reaction is noted and the entire sequence of actions recorded. The system also includes supporting infrastructure to maintain and analyze event history, to preserve event information and to disseminate the information to clients (22). The system (20) and method is implemented in a self-provisioned website to provide an automated, cost-efficient service that is user controlled, flexible, and scalable.

French Abstract

L'invention concerne un systeme et un procede destines a contröler automatiquement des evenements se produisant sur des dispositifs tels que des serveurs Web et des sites Web, a repondre et a proceder a une verification de reponses en boucle fermee. Le systeme et le procede identifient automatiquement des evenements, executent des actions prespecifiees en reponse a ceux-ci, et verifient que les informations relatives aux evenements ont ete transmises avec succes. Une fois qu'un evenement est detecte et qu'une notification d'au moins un repondant a ete executee, le systeme attend d'autres informations pour indiquer que le repondant a recu une notification et/ou a execute ou va executer une action corrective. La notification peut etre etendue a d'autres repondants jusqu'a ce qu'un repondant s'engage a executer une telle action corrective. La presente invention contribue ainsi a assurer que chaque evenement est reconnu, que toute reaction est notee et que toute la sequence d'actions est enregistree. Le systeme comprend egalement une infrastructure de soutien destinee a actualiser et a analyser l'historique des evenements, afin de preserver les informations d'evenements et de disseminer les informations vers les clients. Le systeme et le procede sont mis en oeuvre dans un site Web auto-approvisionne pour fournir un service automatique et rentable lequel est gere par l'utilisateur, souple et evolutif.

English Abstract

The invention provides a safety syringe, which has a cylinder (11), a syringe needle (21), a needle holder (31) associated to the cylinder and adapted to hold the syringe needle, and a plunger (41) associated to the cylinder (11), wherein the plunger (41) comprises a piston (42) and serves to inject a filling of the cylinder (11) via the syringe needle (21), and wherein the plunger (41) can be coupled with the needle holder (31) arranged in the region of a front hole (12) of the cylinder (11), to retract the needle holder (31) together with syringe needle (21) into the cylinder (11) by pulling the plunger (41).

French Abstract

L'invention concerne une seringue de securite, comprenant un cylindre (11), une aiguille (21), un porte-aiguille (31) associe audit cylindre et destine a porter l'aiguille de la seringue, et un piston plongeur (41) egalement associe a ce cylindre (11). Ledit piston plongeur (41) comprend un piston (42), et sert a injecter le contenu du cylindre (11) via l'aiguille (21), ce piston plongeur (42) pouvant etre couple au porte-aiguille (31) place dans la region de trou avant (12) du cylindre (11), ce qui permet de retractor ledit porte-aiguille (31) en meme temps que l'aiguille (21) dans le cylindre (11) par poussees dudit piston plongeur (41).

English Abstract

System and method for putting control of incoming telephone calls in the hands of subscribers with the aid of computer software and the Internet. In effect, a very efficient multiplexer is provided that does not require a change in the behavior of the called party or the calling party. This system permits the called party to hear a spoken message by the calling party in real time, and the content of the spoken message permits the called party to decide how to handle the call. The system adaptively learns and captures the rules of the called party for handling calls, and learns which callers the called party always wishes to talk to. The system uses special control software on the called party's computer which is connected to the Internet. The system employs a central server in which all of the required intelligence is resident. Audio signals are exchanged via non-data channels provided by the telephone companies and by the Internet. Either a very simple Internet busy pick-up is provided, or a very complex messaging system is provided, as desired. A feature is the monitoring and screening of incoming calls before deciding how to handle them. Another feature is the capturing and storage of the decision making profile.

French Abstract

La presente invention concerne un systeme et un procede permettant de se defausser de la gestion des appels telephoniques entrants sur les abones a l'aide d'un logiciel et de l'Internet. On dispose a cet effet d'un multiplexeur tres puissant qui ne demande aucune evolution du comportement des interlocuteurs. Ce systeme permet a l'interlocuteur appele d'entendre en temps reel un message parle provenant de l'interlocuteur appelant, le contenu de ce message parle permettant a l'interlocuteur appele de decider de la facon de traiter l'appel. Le systeme apprend et saisit de facon adaptative les regles qu'utilise l'interlocuteur appele pour le traitement des appels, et apprend a connaitre ceux des appelants auxquels l'interlocuteur appele accepte de parler. Le systeme utilise un logiciel de commande special sur l'ordinateur de l'interlocuteur appele qui est connecte a l'Internet. Le systeme emploie un serveur central dans lequel la totalite de l'intelligence requise est residente. Des signaux audio sont echanges via les canaux non donnees fournis par les entreprises de telephonie et par l'Internet. On dispose ainsi, selon ce que l'on desire, d'une fonction tres simple de prise en cas d'occupation par l'Internet, ou d'un systeme de messagerie tres complexe. Une caracteristique est la surveillance et

le filtrage des appels entrants avant de decider de la facon de les
traiter. Une autre caracteristique est la saisie et la memorisation du
profil de prise de decision.

Fulltext Word Count: 14455

English Abstract

Email messages transmitted from a server via a mail transport protocol
over an email network are passed through a proxy host, which is able to

locally filter useful email from junk email by utilising a series of "scoring" metrics or by more explicit user configuration (killfiles), before passing the filtered mail on to the client user via the chosen mail transport protocol. The proxy server can produce logs and digests of processed junk email and send them by email or present them via a secure World Wide Web document to a system administrator for inspection, and also, for any message which cannot be conclusively scored as being junk, add it to a second per-user mailbox which can be inspected by the intended recipient at his discretion via a World Wide Web interface. The user can then inform the proxy definitively by World Wide Web fill-out form whether the message is junk or not, and email messages confirmed as being junk can then be removed automatically from all mailboxes held on the proxy.

French Abstract

Les messages de courrier électronique transmis à partir d'un serveur via un protocole de transport de courrier sur un réseau de courrier électronique passent à travers un hôte mandataire, qui peut filtrer localement un message de courrier électronique utile à partir d'un message inutile à l'aide de mesures d'évaluation ou d'une configuration utilisateur plus explicite (fichiers de sélection), avant d'envoyer le message filtré à un client via le protocole de transport de courrier choisi. Le serveur mandataire peut produire des fichiers journaux et des fichiers résumés de messages inutiles traités, et les envoyer par courrier électronique ou les présenter via un document Web sur un administrateur de système pour les inspecter, et pour ajouter tout message qui ne peut être évalué de manière décisive comme étant inutile, à une seconde boîte aux lettres par utilisateur pouvant être inspectée par le destinataire suppose à sa discrétion via une interface Web. L'utilisateur peut ensuite indiquer définitivement au mandataire, à l'aide d'un formulaire électronique, que le message est utile ou inutile, et les messages de courrier électronique confirmés comme étant inutiles peuvent ensuite être retirés automatiquement de toutes les boîtes aux lettres contenues dans le mandataire.

English Abstract

Buyer registers (100) receives a secret code for E-mail verification, and responds with their secret code to activate their account. The buyer chooses a geographic area of search (101). The buyer searches for products and services on the present invention Super store. If no prices then log-in-page. Buyer logs-in (106) with the login name and password. Buyer fills out Inquiry and submit (107). Sellers receive their responses in their Intelli-boxes (108). Responses are sorted (112) depending on type of Inquiry from chose. The buyer accepts may of responses (113).

French Abstract

La presente invention concerne un systeme de mise aux encheres inversees et un site Internet a portail de nouvelle generation grace auquel l'utilisateur a le sentiment de surfer dans une zone geographique du monde et est en mesure d'obtenir facilement des informations relatives a cette zone, ceci dans un authentique esprit Internet qui consiste a rapprocher le monde et rendre l'information disponible par le simple truchement d'un clavier, l'idee etant non seulement d'acceder a des informations pour la zone consideree, mais egalement d'acheter et de vendre des biens et des services. Ce systeme permet d'executer des transactions a la fois entre consommateur et entreprise, et entre les entreprises elles-memes. Il vise egalement a reunir le monde tout entier sous forme de pages jaunes electroniques d'une maniere qui changera la facon d'executer des operations commerciales, en faisant fi des frontieres et des modeles commerciaux existants.

English Abstract

A system and method of filtering junk e-mails. A user is provided with
or compiles a list of e-mail addresses or character strings which a user
would not wish to receive to produce a first filter (12). A second filter

(14) is provided including names and character strings which the user wishes to receive. Any e-mail addresses or strings contained in the first filter will be automatically eliminated from the user's system. Any e-mail addresses or strings contained in the second filter would be automatically sent to the user's "in box" (18). Any e-mail not provided in either of the filtered lists will be sent to a "waiting room" (20) for user review. This user review results in the user rejecting any e-mail, the address as well as specific character strings included in this e-mail would be transmitted to a central location (24) to be included in a master list. This master list is periodically sent to each of the users allowing the first filter to be updated.

French Abstract

Systeme et procede de filtrage de courriers electroniques importuns. L'utilisateur se voit attribuer ou compile une liste d'adresses electronique ou de chaines de caracteres que l'utilisateur ne souhaite pas recevoir, de sorte qu'un premier filtre (12) soit produit. Une deuxieme filtre (14) comprenant les noms et les chaines de caracteres que l'utilisateur souhaite recevoir est produit. Toutes les adresses electroniques ou les chaines contenues dans le premier filtre sont eliminees automatiquement du systeme utilisateur. Toutes les adresses electroniques ou les chaines contenues dans le deuxieme filtre sont envoyees automatiquement a la corbeille arrivee (18) de l'utilisateur. Tout courrier electronique ne figurant pas dans une des listes de filtrage est envoye dans une "zone d'attente" (20) pour etre examine par l'utilisateur. Cet examen par l'utilisateur peut aboutir au rejet par celui-ci du courrier electronique, les adresses ainsi que les chaines de caracteres contenues dans ledit courrier sont transmises a un site central (24) pour etre inserees dans une liste principale. Ladite liste est envoyee periodiquement a chaque utilisateur afin de permettre la mise a jour du premier filtre.

Detailed Description

... Filter. However, the system would still operate if no filtering were to be done at the Mail Drop Service level.

When end users receive a **spam** message, they need only to press a **button** to submit it to the Collaborative Filter. This simple action forwards the **junk e-mail** to a mailbox (e.g.

spam@isp.net) where it is examined by the Submittal Filter and, if appropriate, is used to update the Spam...

...and user B) , and one spam message sent to both users. The spam message has never been processed before by the Collaborative Filter.

Initially, the **spam** message enters the system. User A logs on first and checks his e-mail. User A downloads two messages: his non- **spam** message and a **spam** message. Note that the **spam** message passes through the filter since it has never been seen before. User A notes the **spam** message and submits it to the Collaborative Filter via a simple **button** click. The Collaborative Filter uses User A's submission to update the filter. From this point on, any new incoming message that matches the submitted **spam** e-mail will be discarded.

User B now logs on and checks her e-mail. User B only downloads the non-spam message because the...

English Abstract

A multiplayer interactive video gaming device is provided. The device includes a computer workstation assembly, at least one player station, and an interface assembly in operative communication with at least one data port of the computer workstation assembly and configured to receive player input messages from a plurality of the player stations and to output the player input messages to the computer workstation assembly by one or more of the at least one data ports. The interface assembly is operably associated with the at least one player station to route the player input messages from the at least one player station to the computer workstation assembly according to a predetermined protocol so that player input messages generated from simultaneous activation of a plurality of input devices are output to the computer workstation assembly without information loss.

French Abstract

L'invention concerne un dispositif de jeu video interactif a plusieurs joueurs. Ledit dispositif comporte un ensemble poste informatique, au moins un poste de joueur et un ensemble interface en communication active avec au moins un port de donnees de l'ensemble poste informatique et configure pour recevoir les messages d'entree joueur en provenance de plusieurs postes de joueur et pour envoyer en sortie les messages d'entree joueur a l'ensemble poste informatique par le ou les ports d'entree de donnees. L'ensemble interface est associe activement au(x) poste(s) de joueur pour l'acheminement des messages d'entree joueur du ou des postes de joueur a l'ensemble poste informatique selon un protocole predetermine, de sorte que les messages d'entree joueur generes par l'activation simultanee de plusieurs dispositifs d'entree soit envoyes en sortie a l'ensemble poste informatique sans perte d'information.

English Abstract

A method and system is provided for conducting secure power line carrier communications in full duplex over the power lines of a building. The method employs system control logic for (A) multiple extension arbitration logic, (B) privacy from eavesdropping and (C) security from third party central office line capture by means of a digital messaging system in each base (2) and extension (4) unit utilizing a unique and matching security key (preamble) with each message instructing the system to change operating states. Matching of the random security codes may be initiated by the user. By this means unauthorized access to the central office line (especially for long distance calls) and eavesdropping by other users in the same building with similar line carrier telephone extension products is prevented.

French Abstract

Procede et systeme permettant d'etablir des communications protegees par courants porteurs sur ligne secteur en duplex integral sur les lignes secteur d'un batiment. Ledit procede emploie une logique de commande de systeme pour fournir (A) une logique d'arbitrage de lignes internes multiples, (B) la protection contre l'ecoute non autorisee de conversations et (C) la protection contre la capture de la ligne reseau par un tiers a l'aide d'un systeme de messagerie numerique dans chaque unite de base et de poste interne, reposant sur l'utilisation d'une cle de securite unique de correspondance (preamble) avec chaque message ordonnant au systeme de modifier les etats de fonctionnement. La mise en correspondance des codes de securite aleatoires peut etre lancee par l'utilisateur. De cette maniere, l'acces non autorise a la ligne reseau (en particulier pour les appels longue distance) et l'ecoute non autorisee de la part d'autres utilisateurs dans le meme batiment disposant d'equipements internes telephoniques a courants porteurs sur ligne secteur similaires est emphee.

...TEXT: called "spam."
One of the first industry speakers at the meeting -- held at the College of William and Mary and "Webcast" over the Internet -- blasted **anti - spam** laws.
William L. Schrader, CEO of PSINet, said he and his wife get three pounds of "hard copy" spam a day delivered by the U...

...he said. "The fact is, society allows it. Who cares, OK? If somebody is whining at you because they're afraid to hit the 'delete' **button**, which costs nothing to them, costs nothing to the shipper ... There's not a problem here."
Afterward, when he learned that a spam law was...
...of the commission's recommendations, he called it "a political response to people who want the problem gone."
If Internet service providers want to have **anti - spam** policies, that's great, he said. But wherever governments get into the picture, PSINet leaves, he said.
The company left Bavaria after the German state...

...responded, "What it means is we will move all our services out of Virginia."
America Online, on the other hand, likes the idea of an **anti - spam** law. AOL has taken an aggressive stance with spammers, who are loathed in the Internet community.
The company has filed more than 20 lawsuits against...

...said.
The attack on spam is just one of dozens of the commission's recommendations, which range from the technical to the philosophical. Like the **anti - spamming** proposal, many have the potential to affect whether companies want to do business in Virginia.
Another major issue in the document involves pornography. The commission...

"What's the big deal?" asks Schrader, chairman and CEO of PSINet, a Northern Virginia Internet services company. "Are people afraid of the delete **button**?"
George Vradenburg, a senior vice president at America Online, has a different take: "It's like getting so much mail on the front stoop that...

...should be used to address many of the concerns brought about by technology and the market itself."
Yet, several of the specific proposals, like the **anti - spamming** recommendations, call for more government involvement: a crackdown on pornography; new laws and oversight to curtail the collection of personal information by businesses; more agents...

If unwanted e-mail is in the eye of the beholder then I want a spam button

ABSTRACT: A commentary discusses spam, suggesting a spam button to push once to get spam filed for future prosecutions, to get the mail server blocking e-mail from that sender, and to get a message sent according to a spam...
...TEXT: exciting offer."

When I get what my eye beholds as spam - single or bulk, solicited or uncommercial or non - I want to push my spam button once to get that spam filed for future prosecutions, to get my mail server blocking e-mail from that sender, and to get a message sent according to a spam protocol demanding that the sender cease and desist.

Several other alert readers have suggested the spam button should feed a collaborative filtering process so that all my friends on the Net could be saved the trouble of receiving the spam again.

Dealing with spam by pushing one button in less than a second would go a long way toward not making a federal case out of it.

Is anyone working on getting me my spam button? And if that's too hard, which is more diluted, the coffee or tea?

 If unwanted e-mail is in the eye of the beholder then I want a **spam button**

... exciting offer."

 When I get what my eye beholds as spam -- single or bulk, solicited or un, commercial or non -- I want to push my **spam button** once to get that **spam** filed for future prosecutions, to get my mail server blocking e-mail from that sender, and to get a message sent according to a spam protocol demanding that the sender cease and desist.

 Several other alert readers have suggested the **spam button** should feed a collaborative filtering process so that all my friends on the Net could be saved the trouble of receiving the **spam** again.

 Dealing with **spam** by pushing one **button** in less than a second would go a long way toward not making a federal case out of it.

 Is anyone working on getting me my **spam button** ? And if that's too hard, which is more diluted, the coffee or tea?

 Internet pundit Bob Metcalfe invented Ethernet in 1973 and founded 3Com...

In theory, of course, banning offers for phone sex and get-rich-quick
schemes is something all fair-minded people should endorse. Trouble is, "
spam " is one of those emotional icons --like "junk mail"--that often
confuses more than it clarifies. Case in point: Amazon.com's Jeff Bezos
recently sent a holiday e-mail message...

Point, click, sell: even spam can't hurt the effectiveness of e-mail marketing.

Winchester, Jay

Sales and Marketing Management (Sales Mark Manage) v. 150 no12 (Nov. 1998)
p. 100-1

DOCUMENT TYPE: Feature Article ISSN: 0163-7517

LANGUAGE: English

COUNTRY OF PUBLICATION: United States

RECORD TYPE: Abstract RECORD STATUS: Corrected or revised record

ABSTRACT: In spite of the large quantity of unwanted and unsolicited junk mail that clogs E-mail servers, E-mail marketing remains an effective tool. Moreover, although a new E-mail bill requires that all senders have to be clearly identified and that the mailing must contain an obvious, easy-to-use method of cancelling any subsequent mailings, the use of E-mail as a primary marketing tool continues to grow.

DESCRIPTORS:

Electronic mail systems--Effectiveness; Electronic mail marketing;

Internet marketing--Effectiveness; Junk E-mail

Edition: CHICAGOLAND FINAL Section: BUSINESS Page: 5

Word Count: 1,224

...digital day, dreck dealer.

Blow them into bytes, if not bits.

But that wouldn't be polite, would it?

Neither would clicking on the reply **button** of your e-mail software and sending the cybercretins a dose of their own medicine.

Say, in the form of sending them the entire text...

...you'd like, says Mr. Megabyte Manners, although in most cases it won't do all that much good.

The digital devils have thrown up **anti - spamming** shields in the form of robot mailer software and dummy return addresses.

Many of my attempted counterattacks to spamming are bouncing back because the sending...

...through the junk to find the other address.

This means, of course, that launching a counterspam is far more bother than just hitting the delete **button** and getting rid of the offending missive without reading it.

Nonetheless, some of my geekier friends have been known to simply keep a list of...

...a detailed account of the phenomenon is available.

But the bottom line for all those pondering retaliation is that the other side has a delete **button**, too, and so for the most part, spamming

back is wasted effort.

Revenge, as the old con game adage holds, is for suckers.
Mr. Megabyte...

...to automate the blocking so that when you receive something from somebody you don't want to hear from again, you can just click an **icon** and block that sender.

If you're a bit deeper into on-line use, you might opt for the fine Eudora Pro mail software for...

...mail, which is inexpensive, trackable, and targeted, 'the most effective form of digital advertising,' response rates continue to drop. In the last year, the average click-through rate on an e-mail ad has dropped by half to around 5 percent, says e-marketer and analyst Jonathan Jackson. Another

expert says e-mail marketing will drop off just as banner ads have done. This is because users are inundated with **unsolicited e-mail** and have increasingly jettisoned the good with the bad. E-mail marketers are very careful to spell out the differences between good, or permission-based marketing (which can attain response rates of 10 percent or higher) from **spam**. However, those who receive the e-mail have a hard time telling the difference. According to a management consultant, any **unsolicited e-mail** from an unknown address is suspect and is usually jettisoned. List rental is partly responsible for these difficulties, even though, for instance, lists provided by...

Although a group of Washington lawmakers consisting of Democrats and Republicans is drafting legislation to stem the flow of **spam** plaguing some Internet service providers' (ISPs') businesses, some say The First Amendment will prevent successful passage of such laws. **Antispammers** 'want immediate help, fearing a huge volume of **unwanted junk e-mail** in the coming months.' However, no law currently on the books allows consumers to stop **spam** mail once it starts, although such a law does apply to junk snail-mail. Too much **spam** can down e-mail systems and is especially a problem in rural areas where smaller ISPs (with few **antispam** protections) offer the only economical Internet connectivity. According to on ISP, there are times when subscribers cannot connect at all, and e-mail is often delayed. All the ISPs are affected in one way or another by **spam**. Heather Wilson, a Republican representative from New Mexico, has offered a bill that would permit consumers and ISPs to sue spammers for sending **unsolicited commercial e-mail**. Ray Everett-Church, cofounder and counsel of the Coalition Against **Unsolicited Commercial E-mail**, agrees with this approach since it shifts expenses to those sending the **spam** and away from smaller ISPs. However, although a bill is on its way to the House currently, constitutional issues still have to be evaluated. The ACLU, which cites the need to protect anonymity, does not back **antispam** legislation, and one ACLU lawyer remarks 'It's relatively simple to **click** and delete.'

A deluge of spam keeps the delete button busy
Australia: Spam e-mail becoming serious

Spam e-mail in Australia has been identified as a problem worth government's intervention for solution as the number of junk - e - mail received is growing two folds every 4.5 months. The findings were reported by the Coalition Against Unsolicited Bulk E - mail . Responding to the problem, the main solution to curb rising junk e - mail is to promote cultural reformation, international tie-up as well as development of technological solutions. The existing Privacy Act in Australia is not efficient to solve the spam e-mail problem as the legislation is loose that it allows spamming unless the receiver of the junk e - mail opts to stop from seeing the e - mails . However, these junk e - mails are sent without their e-mail addresses, as such it is hard for users to inform their intention of blocking the e-mails.

Title: AOL: essential for sending junk e - mail ?

Abstract: Should marketers providing e-mail advertising to sellers of weight loss, phone sex, and get-rich-quick-scheme services have a right to send **unsolicited e - mail** via online services such as AOL? Does the First Amendment of the US Constitution guarantee such access as a form of free speech? Do the...

... subscribers of other services linked to AOL on the Net. During the period from November 4 to November 11, 1996, Cyber sent approximately 2 million **unsolicited e - mail** messages through AOL to AOL subscribers. AOL tried to block Cyber's e-mail by implementing a program that AOL termed "Preferred Mail The Guard Against **Junk E - Mail**". Under this system, AOL subscribers could **click** on a preference box captioned "I want **junk e - mail** !" If subscribers clicked on the box, they would get unsolicited advertising, but not otherwise. The author looks at the issues in this case.

...as a marketing tool. Says Internet companies are learning that e-mail marketing is more effective than banner ads and even television commercials. Notes while **spam** is not pretty, it is cheap, personal, extraordinarily well targeted, and effective. Mentions established companies such as PepsiCo, Borders, Toyota, and Amazon.com have utilized e-mail marketing with much success in the past year. Says e-mail response rate is as high as ten percent, while the **click** -through rate on banner ads is less than one percent. Compares the cost of direct mail campaigns with much cheaper e-mail campaigns. Says the unique thing about e-mail marketing is it establishes a dialog, something impossible for any other medium. Concludes since **spam** is usually unwanted, marketers must sneak their come-ons into messages people want. (gld)

Computer code for removing junk e - mail messages, directs processor
to automatically generate e-mail message addressed to the reply e-mail
address in response to selection of reply icon

Abstract (Basic):

... has a computer readable memory which includes a code that
directs the processor to display an e-mail client graphical user
interface including a reply icon . A code directs the processor to
receive a selection of the reply icon which includes clicking upon
the reply icon on the e-mail client graphical user interface on the
display. A code directs the processor to generate an e-mail message
which includes a predetermined message indicating a request to remove
the user e-mail address from the SPAM e-mail mailing list. The
predetermined message includes a remove message. A code directs the
processor to automatically send the e-mail message to the reply e-mail
address via an e-mail client in response to the selection of the reply
icon . A code directs the processor to indicate in a log file that the
e-mail message has been automatically sent. An INDEPENDENT CLAIM is
also...
